## Product Description       **+**

Testing is a cornerstone of Kingston's commitment to delivering the most reliable Kingston Dell KTD-PE313LV/16G 16GB DDR3L 1333Mhz ECC Registered Memory RAM DIMM modules you can buy. In addition to the full suite of tests Kingston Technology performs on its memory, each and every Kingston system-specific server module must pass Dynamic Burn-in Testing. It's a unique process designed to further screen out potentially defective modules before they are shipped.

The easiest way to improve performance is with a memory upgrade. Consider upgrading if you're implementing a new database program, adding commerce functionality to your company's website, adding users to an application or if you are faced with an increasing virtual workload. Upgrading your server's memory can serve larger databases, provide faster responses for those using the cloud and improve speed for applications living in memory.Testing is a cornerstone of Kingston's commitment to delivering the most reliable memory you can buy.
